PhishMe delivers a comprehensive human phishing defense platform focused on fortifying employees – your last line of defense after a phish evades your other technology – and enabling incident response teams to better identify, verify and respond to targeted phishing attacks.

PhishMe Simulator™ and PhishMe Reporter™ turn employees into informants through active engagement by simulating real-world phishing attempts, providing on-the-spot education (when needed) and easing the reporting of suspicious emails to security teams. PhishMe Triage™ enables IT security teams to automate and optimize phishing incident response by allowing them to prioritize reported threats. PhishMe Intelligence™ provides security teams with 100% human-verified phishing threat intelligence.

ThreatQ is an open and extensible threat intelligence platform (TIP) to provide defenders the context, customization and collaboration needed for increased security effectiveness and efficient threat operations and management. ThreatQ accelerates the transformation of threat data into actionable threat intelligence by giving defenders unmatched control through a threat library, an adaptive workbench and an open exchange to ensure that intelligence is accurate, relevant and timely to their business. With ThreatQ, customers can automate much of what is manual today and get more out of existing security resources, both people and infrastructure.

Collectively with PhishMe Intelligence and ThreatQ, security teams have an unobstructed view into credible phishing threats leading to higher confidence in the action taken based on the indicators.
PhishMe Intelligence also provides rich contextual human-readable reports to security teams, allowing for in-depth insight into the criminal infrastructure. Analysts and security leaders gain visibility into email message contents, malware artifacts with full threat detail, and executive summaries, to easily understand the threat actor’s TTP operation and risk to the business. These reports are automatically placed into the ThreatQ Library.

PhishMe Intelligence ingested by ThreatQ provides rich insight for assertive action from the following types of indicators:

- Payload URLs and Exfiltration Sites
- Command and Control Servers
- Malicious IP Addresses
- Compromised Domains

In addition, PhishMe provides access to the Active Threat Report and full threat detail for the correlated event.

With this formidable combination, security teams can respond quickly and with confidence to mitigate identified threats. High confidence threat intelligence is operationalized to make actionable decisions based on security policies for ingress and egress traffic.

About ThreatQuotient

ThreatQuotient™ understands that the foundation of intelligence-driven security is people. The company’s open and extensible threat intelligence platform, ThreatQ, empowers defenders to ensure the right threat intelligence is utilized within the right tools, at the right time. Leading global companies are using ThreatQ as the cornerstone of their threat intelligence operations and management system, increasing security effectiveness and efficiency.
